

## **STONS EASM solutions**(stands for Endpoint ,Assets & Storage management)

based on IBM Tivoli family help you see and understand your business infrastructure in real time, so you can transform and adapt while limiting risk and cost to achieve agility and efficiency by standardizing best practices.

### Second TO None Endpoint

STONS EASM solutions help you achieve smarter, faster endpoint management. It combines endpoint and security management into a single solution that enables your team to see and manage physical and virtual endpoints—servers, desktops, roaming laptops, and specialized equipment such as point-of-sale devices, ATMs and self-service kiosks. As threats emerge, the software allows you to rapidly remediate, protect, and report on endpoints in real-time. By automating time-intensive tasks across complex networks, you can control costs while reducing risk and supporting compliance.

### Second TO None Assets Management

STONS EASM solutions enable you to gain real time visibility into asset usage, better govern assets, manage asset lifecycle, measure and manage energy consumption and improve your return on assets.

EASM provides you with the capability to:

Increase the useful life of physical assets with improved business processes for an increased return on assets and enhanced operational efficiency

Gain visibility and control over critical assets that affect compliance, risk and business performance

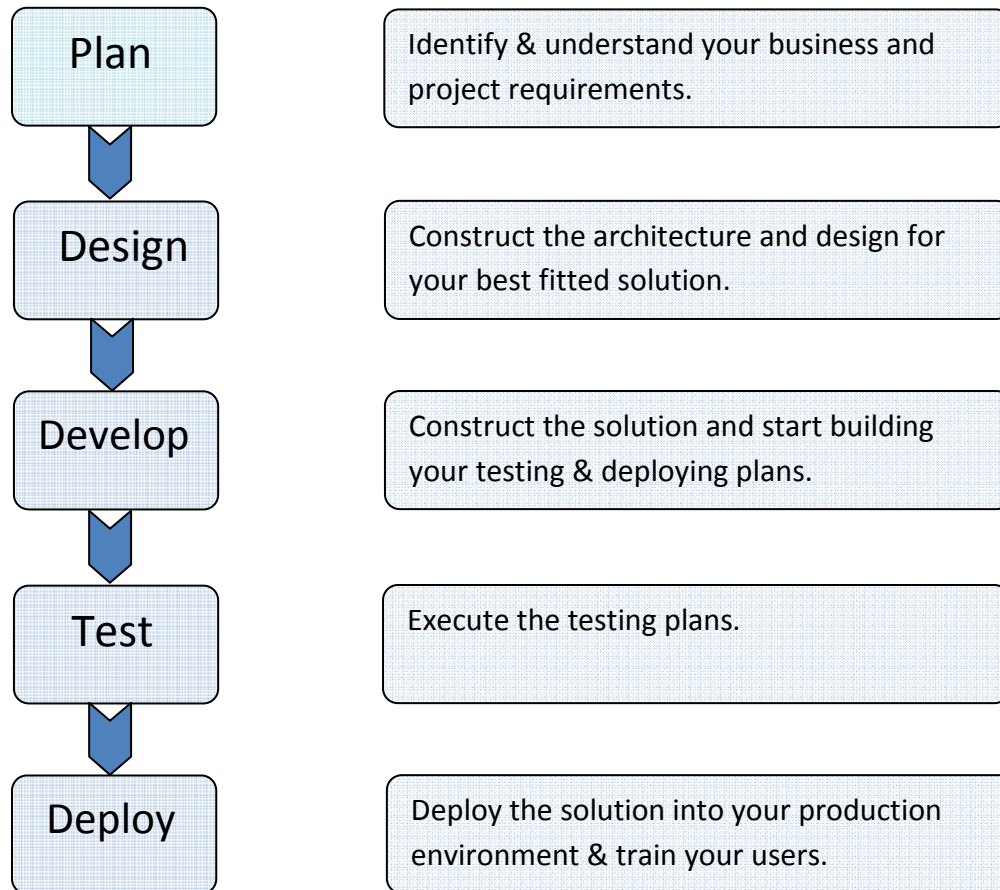

Support all asset types with deep enterprise asset management functionality provided for key industries: Transportation, Manufacturing, Oil & Gas, Life Sciences, Nuclear, Utilities and Service Providers

### Second TO None Storage Management

STONS EASM solutions They provide centralized, automated storage management and data protection that guard against data loss, reduce complexity, ensure availability and enforce compliance. They also help optimize and manage existing storage environments and mitigate risks all while dramatically reducing costs.

By using STONS EASM solutions you can simplify administration , reduce risks , automatically place , migrate and retain data based on business policies , Improve storage infrastructure optimization and performance & Reduce backup and archive storage footprint by 95% or more.

STONS proven methodology is built on the following stages:
